PRODUCT FEATURES

ELITE AUDIO QUALITY

Feel the warmth of the natural sound and hear every detail in the music thanks to studio-quality 96-kHz/64-bit mixing and dithering processing within the DSP, 32-bit high-quality A/D and D/A converters, and a low-jitter clock circuit.

DEDICATED FILTER

Drastically change the sound of a track or make tiny adjustments using the newly developed filter with resonance control and a dedicated knob on each channel.

SIX CHANNELS

Choose your ideal setup and plug in everything from CDJs and turntables to samplers and synths. To make setup easy, the analog input terminals line up with each channel on the top panel.

EXPANDED SEND/RETURN SECTION

Send audio to one of four built-in FX and up to two pieces of external equipment to create unique sounds and even live remixes.

4-BAND EQ / COMPRESSOR

Sculpt your sound just the way you like. Completely isolate the high and/or low and tweak the two mid ranges - which have their own custom curves. Also, if you want to play old or unmastered tracks, turn the compressor knob on the relevant channel and the mixer will "beef up" the audio in real time.

3-BAND MASTER ISOLATOR

Effortlessly control the tone of your entire mix using the 3-band master isolator, which features new boost/cut curves and adjustments to the crossover frequencies and other parameters. Grab the large dials and hype up the crowd by drastically changing the sound.
